Guidance 38
Community Action Treatment (CAT) Team for Ages 0-10

Purpose: To ensure the implementation and administration of the Community Action Treatment for Ages 0-10 (CAT) program, the Managing Entity shall require that Network Service Providers adhere to the service delivery and reporting requirements herein. Best practice considerations and resources are provided to support continuous improvement of the program.

Authority:

CAT for Ages 0-10 teams provide community-based services to children ages 0-10 and families with a mental health or co-occurring substance abuse diagnosis with any accompanying characteristics such as being at-risk for out-of-home placement due to a mental health or substance abuse issues and are assessed for an in-home program.

A. Managing Entity Responsibilities

To ensure consistent statewide implementation and administration these services, the Managing Entity shall include the following elements in subcontracts with Network Service Providers

1. Network Service Providers must adhere to the service delivery and reporting requirements described in this Guidance document.

2. Requirements to submit **Appendix 1** - Persons Served and Performance Measure Report and **Appendix 2** - Quarterly Supplemental Data Report in accordance with the following schedule:

   a. **Appendix 1 –** Monthly submission by the Managing Entity to the Department no later than the no later than the due dates established in **Guidance 32** – Community Action Treatment (CAT) Team.

   b. **Appendix 2** – Quarterly submission by the Managing Entity to the Department no later than the due dates established in **Guidance 32** – Community Action Treatment (CAT) Team.

   c. **Appendix 1 and Appendix 2** can be found in **Guidance 32** – Community Action Treatment (CAT) Team.

3. Participation in all CAT program conference calls, meetings, or other oversight events scheduled by the Department.
4. Requirements for quarterly reporting of actual expenditures, fiscal year-end financial reconciliation of actual allowable expenditures to total payments, and prompt return of any unearned funds or overpayments.

The Managing Entity shall adopt a minimum negotiated service target of children per month, taking into consideration a Network Service Provider's program-specific staffing capacity, historical funding utilization, estimated community needs, or unique geographic and demographic factors of the service location. In the first year of services by a newly procured Network Service Provider, the Managing Entity may implement a phase-in period to achieve the minimum service target numbers.

B. Program Goals

CAT for Ages 0-10 is intended to be a safe and effective alternative to out-of-home placement. Upon successful completion, the family should have the skills and natural support system needed to maintain improvements made during services. The goals of the program are to:

1. Strengthen the family and support systems for youth to assist them to live successfully in the community.

2. Improve school, preschool, and daycare related outcomes such as attendance, grades, and grade advancement.

3. Decrease out-of-home placements.

4. Improve family and youth functioning.

5. Decrease substance use and abuse.

6. Decrease psychiatric hospitalizations.

7. Transition into age-appropriate services.

8. Increase health and wellness; and

9. Provide mentoring and peer services for both child and parent

C. Eligibility

The Managing Entity must include the following participation criteria in subcontracts for CAT for Ages 0-10 services:

1. The child must be otherwise eligible for publicly funded substance abuse and mental health services pursuant to s. 394.674, Florida Statute, and

2. The child must be aged 0-10 with a tentative mental health diagnosis or co-occurring substance abuse diagnosis, an ICD 10 Z-code diagnosis (at-risk population and indicating influence of a social determinant of health, i.e., parent-child conflict), and at-risk of out-of-home placement.

3. Network Service Providers may serve families who exceed the financial eligibility while applying a sliding fee scale in accordance with 394.674 Florida Statute, and Ch. 65E-14.018, Florida Administrative Code, if no other option for treatment at this level is available (e.g., rural areas).

D. CAT for Ages 0-10 Model

The CAT for Ages 0-10 model is an integrated service delivery approach that utilizes a team of individuals to comprehensively address the needs of the young person, and their family, to include the following staff:

1. One full-time Team Leader, the Team Leader may be shared with other CAT teams operating in close proximity,

2. One full-time Mental Health Clinician,

3. One part-time Psychiatrist or part-time Advanced Practitioner Registered Nurse, the Psychiatrist or APRN may be shared with other CAT teams operating in close proximity,

4. One part-time Registered or part-time Licensed Practical Nurse, the RN or LPN may be shared with other CAT teams operating in close proximity,

5. One full-time Case Manager,

6. One full-time Certified Peer Specialist,

7. One full-time Administrator, the Administrator may be shared with other CAT teams operating in close proximity,

The Network Service Provider must have these staff as part of the team; however, the number of staff and the functions they perform may vary by team in response to local needs and as approved by the Managing Entity. Team Leaders, and other specified staff, may be shared with traditional CAT teams operating in close proximity. These teams must each establish a clinical lead to manage the supervision needs of the team. CAT for Ages 0-10 members work collaboratively to deliver the majority of behavioral health services, coordinate with other service providers when necessary, and assist the family in developing or strengthening their natural support system.

CAT for Ages 0-10 funds is used to address the therapeutic needs of the eligible youth receiving services. However, the CAT for Ages 0-10 model is based on a family-centered approach in which the CAT team may provide direct services to family members when doing so better serves the youth and family as a whole. If this is not possible within the structure of the CAT team or in the best interest of the youth or family, the team may assist parents or caregivers to obtain services and supports, which may include providing information and education about how to obtain services and supports, assistance with referrals, and engaging in services.

The number of sessions and the frequency with which they are provided is set through collaboration based on the needs of the individual and family rather than service limits. The team is available on nights, weekends, and holidays. In the event that interventions out of the scope of the team's expertise, qualifications, or licensure (e.g., eating disorder treatment, behavior analysis, psychological testing, substance abuse treatment, etc.) are required, referrals are made to specialists, with coordination from the individual, family, and team. This flexibility in service delivery is intended to promote a "whatever it takes" approach to assisting young people and their families to achieve their goals.

E. Coordination With Other Key Entities

It is important for Network Service Providers to address the provision of services and supports from a comprehensive approach. This includes coordination with other key entities providing services and supports and collaboration with the individual receiving services and their parent or legal guardian. Network Service Providers should identify and coordinate efforts with other key entities as part of their case management function, which include but are not limited to primary health care, child welfare, juvenile justice, corrections, and special education. In addition, Network Service Providers should make all efforts to include natural support systems of the individual and community connections in service delivery.

With special considerations to the 0-5 age group, it is important to establish direct communication and coordination with the Early Learning Coalition. This collaboration will ensure caregivers are provided expedited linkage to childcare services.

If the individual receiving services is a minor served by child welfare, members of their treatment team shall include their child welfare Case Manager and guardian ad litem if one has been assigned. If and how the parent will be included in treatment should be determined in coordination with the dependency case manager and based on individual circumstances. Network Service Providers shall document efforts to identify and coordinate with the other key entities in the case notes.

If the Network Service Provider identifies a child aged 0-12 months involved with the Plan of Safe Care for Infants Affected by Prenatal Substance Use or Substance Exposed Newborn Program, a staffing of the client should be completed to avoid duplication of services.

F. Screening and Assessment

Within 45 days of an individual's admission to services, the Network Service Provider shall complete the North Carolina Family Assessment Scale for General Services and Reunification® (NCFAS-G+R) or the Child and Adolescent Needs and Strengths (CANS) Assessment as the required initial assessment to assist in identifying areas of focus in treatment. The NCFAS-G+R or CANS and Plans of Care (Initial and Master) must be completed for all individuals served, including those transferred from another program within the same agency.

Network Service Providers are encouraged to use a variety of reliable and valid screening and assessment tools in addition to the NCFAS-G+R or CANS as part of the assessment process, with focus on screening for co-occurring mental health and substance use disorder. Additionally, Network Service Providers are encouraged to gather collateral information in coordination with the individual served, their family, and other system partners, to include such things as: school records; mental health and substance abuse evaluations and treatment history; and level of cognitive functioning to develop a comprehensive understanding of the young person's and their family's circumstances.

As with best practice approaches such as Systems of Care, Transition to Independence, and Wraparound, the screening and assessment process should focus on identifying competencies and resources to be leveraged as well as needs across multiple life domains, such as education, vocation, mental health, substance use, primary health, and social connections. Please visit http://www.socflorida.com/wraparound.shtml for guidance on the Florida Wraparound model.

G. Initial Plan of Care

Within 30 days of an individual's admission to services, the Network Service Provider shall complete an Initial Plan of Care to guide the provision of services. Services and supports are established in the Initial Plan of Care, which provides sufficient time to complete the NCFAS-G+R or CANS within the first 45 days. Review of the Initial Plan of Care is required to ensure that information gathered during the first 60 days is considered and that a Master Plan of Care is developed to articulate the provision of services and supports longer-term. The Network Service Provider must document that the Initial Plan of Care was reviewed with the individual being served and their parent or guardian and request that they sign the plan at the time of review. At a minimum, the Initial Plan of Care shall:

1. Be developed with the participation of the individual receiving services and their family, including caregivers and guardians;

2. Specify the CAT for Ages 0-10 services and supports to be provided, to include a focus on engagement, stabilization, and a safety planning if needed; and

3. Include a brief initial discharge planning discussion, to include the general goals to be accomplished prior to discharge.

H. Master Plan of Care

Within 60 days after admission, the Network Service Provider shall review the Initial Plan of Care and update it as needed to include the NCFAS-G+R or CANS initial assessment and other information gathered since admission. The Network Service Provider will implement the updated Initial Plan of Care as the Master Plan of Care. The Network Service Provide may adopt an unrevised Initial Plan of Care if it meets the requirements of the Master Plan of Care and includes the initial NCFAS-G+R or CANS assessment. At minimum the Master Plan of Care shall:

1. Be strength-based and built on the individual's assets and resources;

2. Be individualized and developmentally appropriate to age and functioning level;

3. Address needs in various life domains as appropriate;

4. Integrate substance abuse and mental health treatment when indicated;

5. Specify measurable treatment goals and target dates for services and supports;

6. Specify team members responsible for completion of each treatment goal; and

7. Include a discharge plan and identify mechanisms for providing resources and tools for successful transition from services.

At minimum, the Network Service Provider shall review and revise the Master Plan of Care every three months thereafter until discharge or more frequently as needed to address changes in circumstances impacting treatment and discharge planning. In each review, the Network Service Provider shall include active participation by the individual receiving services, and their family, caregivers, guardians, and other key entities serving the individual and natural supports, as appropriate.

I. Treatment Planning Process

The treatment planning process serves to identify short-term objectives to build long-term stability, resilience, and family unity and to promote wellness and illness management. A comprehensive, team-based approach is increasingly seen as the preferred mechanism for creating and monitoring treatment plans and is consistent with the CAT for Ages 0-10 program.

There is evidence that outcomes improve when youth and families actively participate in treatment and their involvement is essential at every phase of the treatment process, including assessment, treatment planning, implementation, and monitoring and outcome evaluation.[1] Working as a team, the young person, their family, natural supports, and professionals can effectively support individualized, strength-based, and culturally competent treatment.

Network Service Providers shall focus on engagement of the young person and their family as a critical first step in the treatment process, as well as the promotion of active participation as equal partners in the treatment planning process.

J. Services and Supports

The mix of services and supports provided should be dictated by family needs and strengths and serve to strengthen the family. Services and supports and the manner of service provision should be developmentally appropriate for the individual. It is important to discuss the roles and responsibilities of the team members with the individual and family to ensure they understand the roles and responsibilities of each. This is especially important to clarify the role of the peer or mentor, as this person may promote social connectedness and assist in the development of a support network of friends outside of the program.

Network Service Providers shall offer an array of formal treatment interventions and informal supports provided in the home or other community locations convenient and beneficial to the individual and family. Network Service Providers shall assist the individual and family to develop connections to natural supports within their own network of associates, such as friends and neighbors, through connections with community, service, and religious organizations, and participation in clubs and other civic activities. Natural supports ease the transition from formal services and provide ongoing support after discharge. Formal treatment services may include evidenced-based practices appropriate to the circumstances of the young person and their family. Network Service Providers shall leverage resources and opportunities to implement evidenced-based practices with fidelity, which may include partnering with other teams or organizations in the local system of care.

Chapter 394. 491, Florida Statute - Guiding principles for the child and adolescent mental health treatment and support system.

http://www.leg.state.fl.us/Statutes/index.cfm?App_mode=Display_Statute&Search_String=&URL=0300-0399/0394/Sections/0394.491.html

The American Psychological Association advocates for children's mental and behavioral health through their promotion of early prevention and intervention of mental health services across a variety of settings.

---

[1] See, http://www.aacap.org/aacap/Policy_Statements/2009/Family_and_Youth_Participation_in_Clinical_Decision_Making.aspx

December 2024

Support services and natural supports are interventions developed on an individualized basis and tailored to address the individual's and family's unique needs, strengths, and preferences. Support services may include Family Support Specialists; participation in recreational activities; youth development and leadership programs; temporary assistance in meeting and problem-solving basic needs that interfere with attaining treatment goals; and independent living skills.

K. Discharge

As part of the discharge planning process, CAT for Ages 0-10 teams assist in identification of additional resources that help individuals and families maintain progress made in treatment. Discharge planning should include consideration for seamless transition to traditional CAT services as appropriate. Throughout treatment, the Network Service Provider should focus on successful transition from services to appropriate step-down programs. As the individual moves into the discharge phase of treatment, the team may determine the need to modify the service array or frequency of services to ease transition to less intensive services and supports.

Network Service Providers are encouraged to implement a discharge planning process that:

1. Begins at admission;

2. Includes ongoing discussion as part of the Plan of Care review;

3. Includes active involvement of the individual and family; and

4. Includes a transition plan submitted to and developed in collaboration with the individual and family that leverages available community services and supports.

Within seven calendar days of an individual's discharge from services, the Provider shall complete a Discharge Summary containing the following items, at a minimum:

1. The reason for the discharge;

2. A summary of CAT for Ages 0-10 services and supports provided to the individual;
3. A summary of resource linkages or referrals made to other services or supports on behalf of the individual; and

4. A summary of the individual's progress toward each treatment goal in the Master Plan of Care.

L. Incidental Expenses

Incidental expenses pursuant to chapter 65E-14.021, Florida Administrative Code, are allowable under this program. Network Service Providers shall follow state purchasing guidelines and any established process for review and approval and shall consult the Managing Entity regarding allowable purchases.

M. Third-Party Services

Services provided by the core CAT for Ages 0-10 Team staff and funded by contract dollars cannot be billed to any third-party payers. Services provided outside of the core CAT for Ages 0-10 Team staff may be billed to Medicaid or private insurance, to the extent allowable under these programs. If there is an imperative need to provide these services or supports sooner than later, the CAT for Ages 0-10 team should use CAT funds to meet this need, while pursuing third-party billing.

If an individual requires interventions outside the scope of a team's expertise, qualifications, or licensure (e.g., eating disorder treatment, behavior analysis, psychological testing, substance abuse treatment, etc.), the team may refer to

a qualified service provider. The CAT team shall work in concert with any referral providers, the individual, and the family to integrate referral services into overall treatment and to monitor progress toward treatment goals

In accordance with chapter 65D-30.003, Florida Administrative Code, all substance abuse services, as defined in subsection 65D-30.002(16), Florida Administrative Code, must be provided by persons or entities that are licensed by the department pursuant to Section 397.401, Florida Statute, unless otherwise exempt from licensing under Section 397.4012, Florida Statute, prior to initiating the provision of services.

Performance Measures

The Managing Entity shall include the following performance measures in each subcontract:

1. **School, preschool, and daycare attendance if appropriate**

Individuals receiving services shall attend an average of 80% percent of school days, according to the following methodology:

   a. Calculate the percentage of available school days attended by all individuals served during the reporting period.

     - Include all individuals as appropriate.

     - Do not include individuals for whom school attendance in an alternative education setting cannot be determined.

     - Do not include any days an individual is considered medically excused which includes admission to a crisis stabilization unit.

   b. The numerator is the sum of the total number of school days attended for all individuals.

   c. The denominator is the sum of the total number of school days available for all individuals.

2. **Children's Functional Assessment Rating Scales (CFARS) and Functional Assessment Rating Scale (FARS)**

Effective once the Network Service Provider discharges a minimum of 10 individuals each fiscal year, 80% of individuals receiving services shall improve their level of functioning between admission to discharge, as determined by the Children's Functional Assessment Rating Scales (CFARS)

   a. Measure improvement is based on the change between the admission and discharge assessment scores completed using the CFARS

   b. The numerator is the total number of individuals whose discharge score is less than their admission assessment score.

     - Scores are calculated by summing the score for all questions for each person discharged during the current fiscal year-to-date.

     - A decrease in score from the admission score to the discharge score indicates that the level of functioning has improved.

   c. The denominator is the total number of individuals discharged with an admission and discharge assessment during the current fiscal year-to-date.

3. **Living in a Community Setting**

Individuals served will spend a minimum of 90% of days living in a community setting:

   a. The numerator is the sum of all days in which all individuals receiving services qualify as living in a community setting.

December 2024

- "Living in a community setting" excludes any days spent in jail, detention, a crisis stabilization unit, homeless, a short-term residential treatment program, a psychiatric inpatient facility or any other state mental health treatment facility.

- Individuals living in foster homes and group homes are considered living in a community setting.

- Days spent on runaway status, in a residential level one treatment facility, or in a wilderness camp are not considered living in a community setting.

    b. The denominator is the sum of all days in the reporting period during which all individuals were enrolled for services.

4. North Carolina Family Assessment Scale for General Services and Reunification (NCFAS-G+R)

Effective once the Provider discharges a minimum of 10 individuals each fiscal year, 80% of individuals and families receiving services shall demonstrate improved family functioning as demonstrated by an improvement in the Child Well-Being domain between admission and discharge, as determined by the North Carolina Family Assessment Rating Scale for General Services and Reunification (NCFAS- G+R).

    a. Calculate the percentage of individuals who increased their family functioning in the Child Well-Being Domain by at least one point from admission to discharge, as measured by the NCFAS-G+R.

    b. The numerator is the number of individuals whose score on the Child Well-Being domain at discharge is at least one point higher than their score on the Child Well-Being domain at admission during the current fiscal year-to-date.

    c. The denominator is the total number of individuals receiving services who were discharged during the current fiscal year-to-date and for whom the NCFAS-G+R was used at admission.

Note: If an admission NCFAS assessment has been completed on a child and parent/caregiver and the child moves to a different home with a different caregiver, a NCFAS discharge assessment should be completed at that time to ensure the same parent/caregiver is assessed at admission and discharge. Additional consideration should be given to the following:

    a. If services are continued in the new placement with the new parent/caregiver, an admission and discharge NCFAS assessment should be completed for the new parent/caregiver.

    b. If a child changes placements multiple times, the provider and ME should discuss how to report on the NCFAS performance measure for that child, keeping in mind that the NCFAS measures family functioning in the context of services received, so we need to know who received services to determine the level of improvement in functioning.

5. Child and Adolescent Needs and Strengths (CANS) Assessment

Effective once the Provider discharges a minimum of 10 individuals each fiscal year, 80% of individuals and families receiving services shall demonstrate improved family functioning as demonstrated by an improvement in the Life Functioning Domain between admission and discharge, as determined by the Child and Adolescent Needs and Strengths (CANS) Assessment.

    a. Calculate the percentage of individuals who improved their family functioning in the Life Functioning Domain by at least one point from admission to discharge, as measured by the CANS assessment.

    b. The numerator is the number of individuals whose score on the Life Functioning Domain at discharge has improved by at least one point from their score on the Life Functioning Domain at admission during the current fiscal year-to-date.

c. The denominator is the total number of individuals receiving services who were discharged during the current fiscal year-to-date and for whom the CANS assessment was used at admission.

Note: If an admission CANS assessment has been completed on a child and parent/caregiver and the child moves to a different home with a different caregiver, a CANS discharge assessment should be completed at that time to ensure the same parent/caregiver is assessed at admission and discharge. Additional consideration should be given to the following:

   a. If services are continued in the new placement with the new parent/caregiver, an admission and discharge CANS assessment should be completed for the new parent/caregiver.

   b. If a child changes placements multiple times, the provider and ME should discuss how to report on the CANS performance measure for that child, keeping in mind that the CANS assessment measures family functioning in the context of services received, so we need to know who received services to determine the level of improvement in functioning.

Best Practice Considerations:

1. **Models and Approaches for Working with Young People and Their Families**

   National Wraparound Initiative: Wraparound is an evidence-supported practice that is intensive, holistic, strength based, individual and family driven. This individualized care planning and management process engages and supports individuals with complex needs, typically children, youth, and their families, to live in the community and realize their hopes and dreams. The process is typically delivered through case management activities through a team supported approach.

   https://nwi.pdx.edu/wraparound-basics/

   Florida Wraparound model and toolkits available for providers and Managing Entities

   http://www.socflorida.com/wraparound.shtml

2. **Infant mental health (IMH)**

   IMH refers to the social-emotional well-being of children ages 0 to 5 years. A central tenet is that infant development cannot be separated from the caregiving environment, primarily the attachment relationships, as well as the culture in which those relationships develop. Currently there are multiple programs across the Unites States that train infant mental health practitioners. Training is generally intensive, requiring at least one year of study plus ongoing supervision, and includes the following core concepts:

   Relationship-Based Assessment and Intervention: Infants and young children develop within the context of one or more dyad-specific attachment relationships. The physical, cognitive, social, and emotional capacities of the infant are mediated by the quality of the caregiver-child relationships. Similarly, the relationships between the infant mental health practitioner, the infant, and caregiver are prized. Thus, prevention and intervention occur within the context of relationships (i.e., between caregiver and provider, family and organization, etc.).

   Cultural Competence: Just as infants cannot be understood outside of the context of their primary relationships, relationships cannot be understood outside of the culture in which they grow. The impact of socioeconomic or minority status, race, ethnicity, sexuality, and culture on the caregiver, child, and relationship must be acknowledged and explored. Infant mental health is an ecologically valid discipline, accounting for all factors impacting the infant and the caregiving dyad. Therefore, not only do IMH providers offer preventive support and evidence-based intervention to the child, dyad, and family, but they also advocate for services and/or social change, as necessary, for infants and their families to thrive.

9

Reflective Practice: A large core knowledge base that includes child development, adult development, ability to observe behavior, ability to translate between caregiver and child, and ability to work across service systems is required of an IMH specialist. This knowledge base is necessary but not sufficient; an IMH specialist must also have the ability to engage with a caregiver-child dyad while holding each in mind and being aware of what each member, including the specialist, brings to the relationships. Reflection is a necessary skill and responsibility involving the specialist's acknowledging and examining their own responses to the dyad and regularly accessing appropriate supervisory or consultative relationships.

Collaborative Systems: The practice of IMH rarely occurs solely within a therapist's office; rather it is community based. Infants and young children are uniquely dependent upon their caregivers at all times. It is crucial that an IMH specialist be able to assess and coordinate intervention as part of a team of significant figures who interact with a child. This may include health and allied health professionals, educators, extended family members, etc. and is especially important where there are developmental concerns. Some of the most successful prevention and intervention programs have been developed in collaboration with child welfare, judicial courts, education, and primary care practices (e.g., Zero to Three Safe Babies Court Teams, mental health consultation in Early Head Start, embedded mental health professionals in pediatric settings).

Trauma-Informed, Empirically Based Assessment and Intervention: Understanding trauma from a developmental perspective is a core competency of infant mental health. While young children do not have the words to describe traumatic events, they are impacted by trauma at a preverbal level (biological, cognitive, social, and emotional). Young children are especially impacted by interpersonal trauma because they experience the world through the lens of their primary caregivers. Early trauma may include exposure to domestic violence, community violence, parental addiction, or chronic maltreatment. Traumatized infants and dyads have a special need for trained providers who are sensitive to relational and developmental stages. An IMH specialist whose practice implements all of the core concepts previously stated will need additional training and supervision in working with trauma exposed infants and their caregivers. For infants and young children, it is particularly important that evidence-based interventions be implemented in the context of relationship-based practice. Additionally, it is key to identify those providers who offer IMH Services and to disseminate a list with provider contact information to community partners.

3. **Screening and Assessment Resources**
